Class 9 Case study: Improve Marketing Efficiency for Tesco Using Supervised Learning

Dr Wei Miao

UCL School of Management

November 1, 2023

Section 1

Business Objective

Background

Tesco is looking to promote its new private-label products to existing customers. The marketing analytics team decides to use the conventional mailing marketing strategy so that customer would receive color-printed leaflets via Royal Mails to their doorsteps.

Cost-Benefit Analyses

- Cost: Each mail costs £1.5 to produce and another £0.5 to mail to the customers.
- The cost is the marketing offer we send, cost_per_offer

```
# cost of sending an offer
cost_per_offer <- 1.5 + 0.5
cost_per_offer</pre>
```

[1] 2

Cost-Benefit Analyses

- Benefit: If customer responds to the offer, the management expects customers to spend £20 on trying the new products, where the COGS is 60%.
- The benefit is the profit margin if a customer responds, profit per customer

```
# profit from a responding customer
COGS <- 0.6
profit_per_customer <- 20 * (1 - COGS)
profit_per_customer</pre>
```

[1] 8

Break-Even Analysis: Break-Even Response Rate

- In order to break-even, we can calculate the break-even response rate from customers, which is the minimum response rate we need of a customer in order not to lose money from sending the marketing offer¹
- break_even_response <- cost_per_offer/profit_per_customer
- preak_even_response

[1] 0.25

- Only if a customer responds to us with at least 25% response rate can we recover the costs of making an marketing offer.
- If we send offers to customers whose expected response rate is lower than 25%, we make a loss by expectation.

Section 2

Data Analytics

Data Analytics

Data collection and cleaning

• Split the data into a training set and a test set

Data analytics

- Train predictive models on the training set
- Predict customer response rate on the test set

Business recommendations

- Target customers based on predicted response rate
- Compute and compare ROIs for each targeting method: (1) blanket marketing; (2) decision tree; (3) random forest

Let's work on the Quarto document together!
